

BIOLOGY 111 (section 1): INTRO TO CELL & MOLECULAR BIOLOGY

Spring 2018

Instructor: Dr. Christopher Freeman

Time/Location: Tuesday and Thursday 12:45- 2:00pm HWW 211

E-Mail: freemancj@cofc.edu

Office Location: Harbor Walk West 215

Office Hours: Wednesday 9 am to 11 am

COMMUNICATION: Email is the best way to get in touch with me. I am happy to answer questions quickly (within 24 hrs) during the week and on or potentially before Monday if you send me an email after 5 pm on Friday.

COURSE DESCRIPTION: Introduction to Cell and Molecular Biology is a foundation course for science majors that emphasizes:

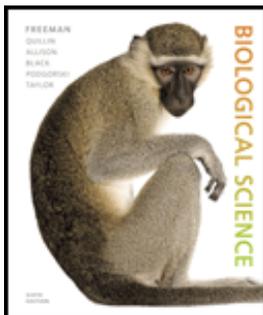

- Critical thinking skills
- Structure and function in biological systems at both molecular and cellular level

Key topics include:

- The scientific process
- Biochemistry
- Molecular biology
- Cell structure and function
- Respiration
- Photosynthesis
- Genetics.

Completion of this course satisfies a General Education requirement and BIOL 111L is a co-requisite.

REQUIRED TEXTBOOK: Biological Science 6th Edition by Freeman et al.

OAKS: (enter <http://my.cofc.edu> and click on the link to OAKS).

Check daily (for BIOL111 section 01) for information, updates and uploaded documents, study guides, lecture slides, the syllabus, etc. All communication pertaining to this class will go through OAKS or your college email. Students are responsible for remaining up to date with OAKS and any email correspondence.

COURSE STRUCTURE, ASSESSMENTS, and GRADING: The course will be divided into six learning elements that each has an exam (**6 exams!**). Exams will be short answer and multiple-choice questions. Exam questions will be pulled from lecture slides, lecture notes, and the textbook material. I therefore urge students to read ahead of lectures, take detailed notes, and ask questions.

There will also be a comprehensive final exam at the end of the course.

*Make up exams will not be administered except under situations like a documented medical or family emergency.

GRADING BREAKDOWN:

- Exams: 600 Points (100 points each)
 - Final Exam: 200 Points
- Total: 800 Points

$\geq 93\%$ = A	90-92 = A-	87-89 = B+	83-86 = B
80-82 = B-	77-79 = C+	73-76 = C	70-72 = C-
67-69 = D+	63-66 = D	60-62 = D-	≤ 59 = F

- 0 due to academic dishonesty = XXF

ATTENDANCE and CLASS ETIQUETTE: Please attend all meetings of the class. Students are solely responsible for getting notes or any missed information from classmates and/or visiting the professor during office hours if they have questions due to a missed class. **All small (cell phones, tablets) electronics must be turned off during class.**

SUPPLEMENTAL INSTRUCTION: A supplemental Instruction (SI) leader will be assigned for this course (more details TBD). This leader is a student that will run active SI gatherings and study sessions to answer questions, review content, and help with problems.

ACCOMODATING DISABILITIES: The college and professor will make reasonable accommodations for students with documented disabilities. Students should see the Center for Disability Services/SNAP and notify the professor as soon as possible so that we can make necessary arrangements.

SPRING 2018 TENTATIVE COURSE SCHEDULE, AND CORRESPONDING [BOOK CHAPTER]:

<i>ELEMENT 1: The molecules of life</i>	
9 Jan	Introduction, Biology, and Life [1].
11 Jan	Chemical bonds, thermodynamics, water [2]
16 Jan	Proteins [3]
18 Jan	Nucleic acids [4]
23 Jan	Carbohydrates [5]
25 Jan	EXAM 1
<i>ELEMENT 2: Cell structure and function, part 1</i>	
30 Jan	Lipids and membranes [6]
1 Feb	Passive and active transport [6]
6 Feb	Cell structure and function [7 and 8]
8 Feb	Cell structure and function [7 and 8]
13 Feb	EXAM 2
<i>ELEMENT 3: Cell structure and function, part 2</i>	
15 Feb	Respiration [9]
20 Feb	Respiration [9]
22 Feb	Photosynthesis [10]
27 Feb	Photosynthesis [10]
1 Mar	EXAM 3
<i>ELEMENT 4: Cell structure and function, part 3</i>	
6 Mar	Cell to cell interactions [11]
8 Mar	Mitosis [12]
13 Mar	Meiosis [13]
15 Mar	EXAM 4
20 Mar	Spring Break
22 Mar	Spring Break
<i>ELEMENT 5: Gene structure and expression, part 1</i>	
27 Mar	Mendel and the gene [14]
29 Mar	Mendel and the gene [14]
3 Apr	DNA synthesis and repair [15]
5 Apr	How genes work [16]
10 Apr	EXAM 5
<i>ELEMENT 6: Gene structure and expression, part 2</i>	
12 Apr	Transcription [17]
17 Apr	Gene expression in pro- and eukaryotes [18 to 19]
19 Apr	Biotechnology, Evolution, and Genes [20 to 21]
24 Apr	EXAM 6
26 Apr	12-3pm Final Exam

HONOR CODE AND ACADEMIC INTEGRITY:

<http://studentaffairs.cofc.edu/honor-system/studenthandbook/index.php>

Lying, cheating, attempted cheating, and plagiarism are violations of our Honor Code that, when identified, are investigated. Each incident will be examined to determine the degree of deception involved. Students may have the opportunity to meet with the Dean of Students and may be brought before the Honor Board. Depending on the severity, incidents may lead to a written intervention, a XF in the course indicating failure of the course due to academic dishonesty, disciplinary probation, suspension (temporary removal) or expulsion (permanent removal) from the College by the Honor Board. Students should be aware that unauthorized collaboration--working together without permission-- is a form of cheating. Unless the instructor specifies that students can work together on an assignment, quiz and/or test, no collaboration during the completion of the assignment is permitted. Other forms of cheating include possessing or using an unauthorized study aid (which could include accessing information via a cell phone or computer), copying from others' exams, fabricating data, and giving unauthorized assistance. Research conducted and/or papers written for other classes cannot be used in whole or in part for any assignment in this class without obtaining prior permission from the instructor.

OFFICIAL BIOL 111/L – 112/L COURSE LEARNING GOALS AND OBJECTIVES

This general education science sequence provides a background for understanding and evaluating contemporary topics in biology. Students develop a foundational understanding of core concepts to use and on which to expand in upper level courses. They also develop the critical competencies that form the bases for the practice of science and use of scientific knowledge.

Core Concepts

This 2-semester course sequence in general biology addresses fundamental principles in biology to prepare students for sophomore and upper level courses in biology:

- **EVOLUTION:** The diversity of life evolved over time by processes of mutation, selection, and genetic change. The theory of evolution by natural selection allows scientists to understand patterns, processes, and relationships that characterize the diversity of life.
- **STRUCTURE AND FUNCTION:** Basic units of structure define the function of all living things. Structural complexity, together with the information it provides, is built upon combinations of subunits that drive increasingly diverse and dynamic physiological responses in living organisms. Fundamental

structural units and molecular and cellular processes are conserved through evolution and yield the extraordinary diversity of biological systems seen today.

- INFORMATION FLOW, EXCHANGE, AND STORAGE: The growth and behavior of organisms are activated through the expression of genetic information at different levels of biological organization and depend on specific interactions and information transfer.
- PATHWAYS AND TRANSFORMATIONS OF ENERGY AND MATTER: Biological systems grow and change by processes based upon chemical transformation pathways and are governed by the laws of thermodynamic and will be explored to understand how living systems operate, how they maintain orderly structure and function, and how physical and chemical processes underlie processes at the cellular level (i.e. metabolic pathways, membrane dynamics), organismal level (i.e. homeostasis) and ecosystem level (i.e. nutrient cycling).
- SYSTEMS: Living systems are interconnected and interacting and biological phenomena are the result of emergent properties at all levels of organization, from molecules to ecosystems to social systems. The course will explore the dynamic interactions of components at one level of biological organization to the functional properties that emerge at higher organizational levels.

The specific topics covered in each course include: Biology 111 & Biology 111L

- Chemical and physical properties of life
- Cell form & function
- Energetics, metabolism, and photosynthesis
- The cell cycle
 - Mitosis and cell reproduction
- Meiosis and sexual reproduction
- Mendelian genetics / Patterns of inheritance
- Human Inheritance
- The molecular basis of inheritance
- DNA and protein production
- Regulation of gene expression
- Some aspects of biotechnology

Biology 112 & Biol 112 L

- The development of evolutionary thinking
- Basic evolutionary processes
- Comparative plant form & function
- Comparative animal form & function

Core Competencies

- **Nature of Scientific Knowledge**
 - Understand the intellectual standards used by scientists to establish the validity of knowledge, evidence, and decisions about hypothesis & theory acceptance. These standards include: 1) science relies on external and naturalistic observations, and not internal convictions; 2) scientific knowledge is based on the testing of hypotheses and theories, which are under constant scrutiny and subject to revision based on new observations; 3) the validity of scientifically generated knowledge is established by the community of scientists through peer review and open publication of work.
 - Understand that new ideas in science are limited by the context in which they are conceived; are often rejected by the scientific establishment; sometimes spring from unexpected findings; and usually grow slowly, through contributions from many investigators.
 - Understand that science operates in a world defined by the laws of chemistry and physics.
 - Understand the differences and relationships among scientific theories, hypotheses, facts, laws, & opinions.
 - Understand the differences between science and technology, but also their interrelations.
 - Understand the dynamic (tentative) nature of science.
- **Scientific Methods of Discovery**
 - ¹ Understand the methods scientists use to learn about the natural world (observing; questioning; formulating testable deductive hypotheses; controlled experimentation when possible; observing a wide range of natural occurrences and discerning (inducing) patterns).
 - Apply physical/natural principles to analyze and solve problems.

¹ This learning goal will be measured as part of the general education assessment. The specific learning outcome to be measured is: *Students can apply physical/natural principles to analyze and solve problems.*

- **Develop a Scientific Attitude**
 - Develop habits of mind that foster interdisciplinary and integrative thinking (within biology; between biology and other sciences; between science and other disciplines).
 - Develop an appreciation for the scientific attitude - a basic curiosity about nature and how it works.

- **Develop scientific analysis and communication skills**
 - Develop quantitative reasoning skills (quantitatively expressing the results of scientific investigations, or patterns in nature and using knowledge of biological concepts to explain quantitatively-expressed data or patterns).
 - Understand the probabilistic nature of science and the use/application of inferential statistics to test hypotheses.
 - Develop scientific information literacy (library, internet, databases etc...); find and evaluate the validity of science-related information.
 - Communicate scientific knowledge, arguments, and ideas in a variety of different contexts (scientific, social, cultural), utilizing a variety of different media (scientific articles, policy statements, editorials, oral presentations etc.).
 - Develop cooperative problem-solving skills (working effectively in teams), but also habits of mind and skills that foster autonomous learning.
- **Develop an appreciation for the impact of science on society.**
 - Develop an appreciation of humans as a part of the biosphere and the ²impact of biological science on contemporary societal/environmental concerns.
 - Knowledge of the history of the biological sciences and the influences of politics, culture, religion, race, and gender on the scientific endeavor.

² This learning goal will be measured as part of the general education assessment. The specific learning outcome to be measured is: *Students can demonstrate an understanding of the impact that science has on society.*

Signature assignments for measuring learning outcomes

Learning Outcome 1: Students apply physical/natural principles to analyze and solve problems.

This learning outcome is assessed using the poster (or scientific article) generated in Biology 112 lab as part of the multi-week student-directed independent research project. In this project students use data they collect (or has been collected in actual research investigations) to test an hypothesis of their choosing. These projects may be themed, with all student groups addressing different aspects of a larger question, emphasizing the interdependence of various research groups needed to address complicated problems. This

multi-week project begins the class identifying what questions need to be addresses in the larger problem. Individual student groups then become experts in these areas of the larger problem. The smaller research teams develop a hypothesis, and write a research proposal to test their hypothesis. Students collect (or use already collected data), summarize and statistically analyze the data, and draw conclusions.

Learning Outcome #2 - Students demonstrate an understanding of the impact that science has on society.

Biology 112 lab Students produce a written document based on one of the case-based labs (examples - policy statement, article, stake-holder professional letter or poster) that requires them to research and apply biological knowledge or evidence to defend or critique a proposed solution to a biology-related societal issue. Although the choice of the specific issue or proposed solution is course-section specific, some examples of potential issues include

- exploring environmental/health impacts of genetically modified organisms
- the use of performance enhancing drugs in sports
- the development of antibiotic resistance in disease organisms

1 This learning goal will be measured as part of the general education assessment. The specific learning outcome to be measured is: *Students can apply physical/natural principles to analyze and solve problems.*

2 This learning goal will be measured as part of the general education assessment. The specific learning outcome to be measured is: *Students can demonstrate an understanding of the impact that science has on society*
